

How do I...

Install the plug-ins so I can run PracticeMaker?

Macintosh

If you received a stuffed archive with the FileMaker Pro Plug-ins, you will need to unstuff/unzip the folder.

1. Find your FileMaker Pro application program folder. Inside this folder you will see a folder called **FileMaker Extensions**. Open this folder. You will see a bunch of items with names like: DBF, ClarisWorks, Excel, etc.
2. Open the folder of Plug-ins that came with PracticeMaker. You will need to place each of these into the **FileMaker Extensions** folder. **DO NOT COPY THE FOLDER, ONLY COPY THE CONTENTS**. If you place the plug-ins *folder* into the extensions folder, the program **will not work**.
3. You can now trash the empty folder and close all the other folders and run PracticeMaker.

Alternately, if you are installing the plug-ins from one workstation to another...

1. Find the FileMaker Pro application program folder and open the **FileMaker Extensions** folder. You will need to copy the following plug-ins to the other machine: Troi Text Plug-In, Troi File Plug-In, Troi Dialog Plug-In*, Troi Grabber Plug-In*, SecureFM (or Menu Manager), ScriptScheduler (or øAzium Events), MacDialog, Window Utility, Calendar FM*, Calculator*.
*If this plug-in is not in your folder and PracticeMaker works properly, then you have a version of the software that does not require this program.
2. Find the FileMaker Pro application program folder on the other workstation.
3. You will need to place each of the plug-ins you just copied into the **FileMaker Extensions** folder. **DO NOT PUT THESE IN A SUB-FOLDER, ONLY COPY THE PLUG-INS**. If you place the plug-ins *folder* into the extensions folder, the program **will not work**.
4. PracticeMaker should now run on the additional workstation.

How do I...

Install the plug-ins so I can run PracticeMaker?

Windows

If you received a zipped archive with the FileMaker Pro Plug-ins, you will need to unzip the folder.

1. Find your FileMaker Pro application program folder (most likely in the Programs folder on your C: drive). Inside this folder you will see a folder called **System**. Open this folder. You will see a bunch of items with names like: DBF, ClarisWorks, Excel, etc.
2. Open the folder of Plug-ins that came with PracticeMaker. You will need to place each of these into the **System** folder. **DO NOT COPY THE FOLDER, ONLY COPY THE CONTENTS**. If you place the plug-ins *folder* into the system folder, the program **will not work**.
3. You can now trash the empty folder and close all the other folders and run PracticeMaker.

Alternately, if you are installing the plug-ins from one workstation to another...

1. Find the FileMaker Pro application program folder and open the **System** folder. You will need to copy the following plug-ins to the other machine: Troi Text Plug-In.fmx, Troi File Plug-In.fmx, Troi Dialog Plug-In.fmx*, Troi Grabber Plug-In.fmx*, SecureFM.fmx (or MenuManager.fmx), ScriptScheduler.fmx (or øAziumEvents.fmx), WinDialog.fmx , WindowUtility.fmx, Calendar FM.fmx*, Calculator.fmx*. If you have it set not to show extensions, you will not see the .fmx.

*If this plug-in is not in your folder and PracticeMaker works properly, then you have a version of the software that does not require this program.

2. Find the FileMaker Pro application program folder on the other workstation.
3. You will need to place each of the plug-ins you just copied into the **System** folder. **DO NOT PUT THESE IN A SUB-FOLDER, ONLY COPY THE PLUG-INS**. If you place the plug-ins *folder* into the system folder, the program **will not work**.
4. PracticeMaker should now run on the additional workstation.
